

Q

"How to select frames on the timeline? If i need to select the instances from number 70 to number 80 how can i do it? Keep in mind that i use an iMac all in one with Lion. "

A First, be sure the timeline is not compacted...or shrunk.. so you can actually see the individual frames....Zoom in on the timeline. Click and drag the Z on top of the left vertical slider, or choose "fit to frames".

You need to use the "Z" (zoom) button at the top left of the Timeline to expand the Timeline .

Span Selection Method ONE:

In the timeline, under the film-strip, LMB-clic (hold) & drag along the timeline to make your selection, from A to B or from B to A, as simple as that,

(LMB = Lft Mouse Button or CntrlClk on MAC)

Span Selection Method TWO:

In the timeline, **under** the film-strip, LMB-clic (hold) & drag along the timeline to make your selection, from A to B or from B to A, as simple as that.
